PROFILE

UX/UI and product designer with a Master of Engineering in Information Technology, focused on accessible, user-centred digital products and scalable design systems. At Nokia, I redesigned enterprise web application screens within an established design system, built reusable components for the shared library and followed WCAG 2.2. I designed a mobile marketplace service end to end, from user research to a tested high-fidelity prototype with an AI-assisted listing flow where users review and edit the AI's suggestions. AI is part of my everyday workflow: I use Claude, Codex, ChatGPT and Google Stitch to explore ideas and turn Figma designs into working front-end screens, and I review what they produce instead of accepting it as is. A background in engineering, IT support and sales taught me to understand the user's problem before solving it.

EXPERIENCE

UX/UI Designer (Trainee) · Nokia Feb 2025 – Aug 2025
Finland · Enterprise web application migration

- Redesigned enterprise web application screens in Figma for a platform migration, keeping visual and functional continuity so existing users could keep working without disruption.
- Worked within Nokia's design system, reusing tokens and library components, and built new reusable components that were added to the shared library for team-wide use.
- Surfaced and documented WCAG 2.2 compliance issues in the team's accessibility records, building accessibility into delivery.
- Worked in short review cycles with developers and product colleagues to make sure designs could be built as specified, refining and shipping UI updates through to release.

UX Researcher & Designer · ThinkHive Technologies May 2023 – Jan 2025
India · Grocery app research and design

- Mapped user needs and pain points across the shopping journey from survey data, giving the product team an evidence base for prioritising features.
- Turned research into affinity-mapped insight summaries that shaped product decisions, so the roadmap reflected users rather than assumptions.
- Translated insights into wireframes and interactive prototypes with clear information architecture and reusable UI patterns.

SKILLS

Research
User interviews, surveys, focus groups, competitive analysis, affinity mapping, research synthesis, personas, empathy and journey maps, heuristic evaluation

UX & interaction design
Information architecture, user flows, interaction design, paper and digital wireframing, interactive prototyping

Service & process design
Journey and service mapping, task and process flows, complex forms and filters, multi-step flows

UI design
High-fidelity mobile and web UI, style guides (colour, type, grid), visual hierarchy, responsive layouts, auto layout and variants

Design systems & accessibility
Tokens, reusable components, atomic design, WCAG 2.2, contrast checks, inclusive design

Designing AI experiences
AI-assisted features where the user reviews and edits suggestions, user control and trust, loading, error and retry states

AI in my workflow
AI-assisted ideation, UI generation and prototyping; turning Figma designs into working front-end screens with AI; critically reviewing AI output for quality and accessibility

Ways of working
Agile/Scrum, short review cycles, developer handoff, designing within technical constraints, working with product owners and developers

TOOLS

DESIGN AND RESEARCH
Figma · Miro · Adobe XD · Notion · UXtweak

AI
Claude · Codex · ChatGPT · Google Stitch

CODE
VS Code · GitHub · HTML · CSS · JavaScript (basic)

SELECTED PROJECT

Tiny Treasures · Mobile marketplace for children's items May 2026

Master's thesis · End-to-end UX/UI

- Researched why resale breaks down through a survey of 25 parents in Finland, 3 interviews, a focus group and a benchmark of 7 competitors (including Vinted, Tori and Zadaa), isolating three core barriers: slow listing, low trust and poor size filtering.
- Synthesised 5 research themes into 2 personas, a seller journey map, information architecture and end-to-end buyer and seller flows.
- Designed 16 high-fidelity Figma screens: age, size and condition filters, a Parent Trust Score, in-app chat, checkout and order tracking.
- Designed an AI-assisted listing flow that suggests item details from photos, with review-and-edit before posting and clear loading, error and retry states, so the AI helps without taking control away and a multi-step manual task becomes a single review step.
- Used Claude and Codex to build the designs as interactive front-end screens (HTML, CSS, JavaScript) in VS Code, so the concept could be clicked and tested without waiting for a development team.
- Ran a heuristic evaluation against Nielsen's 10 heuristics that found 9 issues, and fixed the critical one by adding error and retry screens.

EARLIER EXPERIENCE

Technical Support Associate · IBM Nov 2018 – Mar 2021

India · Enterprise software

- Ran usability feedback sessions, interviews and surveys with users of enterprise software, learning first-hand where business tools fail the people using them.
- Diagnosed user issues and debugged browser problems in HTML, CSS and JavaScript, the technical base I now use to build what I design.

Sales Development Manager · HDFC Life Aug 2017 – Jul 2018

India · Regulated financial services

- Built client relationships in a compliance-driven industry by researching needs and tailoring offerings, sharpening stakeholder communication.

EDUCATION

Master of Engineering, Information Technology

Metropolia University of Applied Sciences, Finland · 2021–2026

Thesis: Design thinking and human-centred design in mobile app development

B.Tech in Mechanical Engineering

CMR Institute of Technology, India · 2013–2017

CERTIFICATIONS

Google UX Design Professional Certificate

Google IT Support course

LANGUAGES

English	Professional
Finnish	Intermediate

INTERESTS

Drawing and painting, AI tools
